Milind Patel

Senior Full-Stack Developer

milindpatel4416@gmail.com • 647-273-1722 • milindpatel.github.io • github.com/Milindpatel • Toronto

PROFESSIONAL SUMMARY

Senior full-stack developer with 10+ years of experience (since 2015) designing, building, and maintaining complex, high-availability web systems with C#, ASP.NET Core, Angular, React, and Microsoft SQL Server on Azure and AWS. Currently architects, maintains, and develops 8 applications (5 customer-facing, 3 internal) and 12 API integrations — including Google Maps location services and Bambora and Moneris payment tokenization — running on Kubernetes behind load balancers, with a focus on scalability, resilience, performance, and security. Has kept these systems PCI DSS compliant through 4 consecutive years of passed audits, builds Claude-powered AI agents for complex engineering work, and leads a blended team of 3 in-house and 2 vendor developers.

TECHNICAL SKILLS

Backend	C#, ASP.NET Core, ASP.NET MVC, .NET Framework, .NET Core Web API, RESTful APIs, JSON, Dependency Injection, Google Maps JavaScript API, Geocoding API
Frontend	Angular, React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Responsive Design
Cloud & DevOps	Microsoft Azure, AWS, Azure DevOps, Git, TFS, CI/CD, Kubernetes, Load Balancing, Networking (DNS, SSL/TLS, Firewalls), Azure Application Insights
Architecture & Patterns	System Architecture, High Availability & Scaling, Backend-for-Frontend (BFF), Resilience Patterns (Retry, Circuit Breaker), Caching, Strategy Pattern, Layered / N-tier Architecture, SOLID, RESTful API Design, Event-Driven Messaging (RabbitMQ), Legacy Modernization, ETL (SSIS)
Databases	MS SQL Server, Oracle, T-SQL, SSIS, Stored Procedures, Query Optimization
AI & Prompt Engineering	Claude, Claude Code, Anthropic API, ChatGPT / OpenAI API, Cursor, Groq (Llama 3.3), Prompt Engineering, LLM Integration, RAG / LLM Grounding, Streaming LLM Responses, AI-Assisted Development, AI Agents, Agentic Workflows
Security & Compliance	PCI DSS, Payment Tokenization (Bambora, Moneris), OWASP Top 10, Secure Coding, Vulnerability Remediation, Audit Evidence Management
Practices	Agile / Scrum, SDLC, Code Review, Release Management, OOP, UML, JIRA, Technical Leadership
Business Process Management	AWD BPM, IBM BPM

PROFESSIONAL EXPERIENCE

Web Development Manager

Jan 2026 – Present

Rexall, Mississauga

- Architect, maintain, and develop 8 applications — 5 customer-facing and 3 internal — and 12 API integrations on ASP.NET Core, Angular/React, and MS SQL Server, authoring design documents and impact analyses for cross-application changes.
- Built location and address features with the Google Maps JavaScript API and Geocoding API — interactive maps and conversion of customer addresses into map coordinates — caching repeat geocoding lookups to reduce API calls and cost.
- Integrated the Bambora and Moneris payment gateways and set up payment tokenization, replacing card numbers with secure tokens so cardholder data is not stored in Rexall's applications and checkout stays PCI DSS compliant.
- Designed a resilient integration layer for internal and third-party APIs — a Backend-for-Frontend (BFF) API that centralizes calls and response transformation, with retry, timeout, and circuit-breaker policies.
- Lead the incremental modernization of legacy ASP.NET Framework applications to ASP.NET Core, separating tightly coupled modules into independently deployable services and applying Dependency Injection, the Strategy pattern, and layered architecture.
- Run the applications as containerized workloads on Kubernetes behind load balancers — defining deployments, readiness and liveness probes, and horizontal autoscaling — and partner with the networking team on DNS, SSL/TLS, and firewall rules.
- Troubleshoot complex production issues spanning the application, database, and network layers using Azure Application Insights and log analysis, driving root-cause fixes.

- Own PCI DSS compliance across the Magento, .NET, and React applications — remediating vulnerability-scan findings (OWASP Top 10), hardening code and configuration, and compiling audit evidence — passing every PCI audit for 4 consecutive years.
- Design Claude-powered AI agents for complex, multi-step engineering work — cross-application impact analysis, legacy-code refactoring, test generation, and audit-evidence preparation — and authored team guidance on prompt engineering.
- Lead a blended team of 3 in-house and 2 vendor developers — running architecture and design reviews, PR reviews, and sprint planning with Product, and joining vendor and security assessments.

Technologies: C#, ASP.NET Core, Angular, React, TypeScript, MS SQL Server, Kubernetes, Load Balancing, Azure, AWS, Azure DevOps, Google Maps JavaScript API, Geocoding API, Bambora, Moneris, Magento, PCI DSS, Claude, AI Agents

Lead Developer
July 2022 – Jan 2026

Rexall, Mississauga

- Developed and maintained full-stack features across Rexall's ASP.NET Core and ASP.NET Framework applications with Angular 12 and React 18, building RESTful APIs, reusable UI components, and third-party integrations including Google Maps and payment gateways.
- Resolved database and application bottlenecks by rewriting complex T-SQL stored procedures, adding indexes, and analyzing execution plans, speeding up page loads and long-running reports.
- Remediated PCI DSS audit and vulnerability-scan findings across the Magento sites, ASP.NET C# applications, and React applications and gathered audit evidence, with every annual audit passed.
- Owned code merges, code drops, and patches across multiple ASP.NET C# applications, and built and maintained Azure DevOps build and release pipelines for consistent, repeatable deployments.
- Provisioned and configured Azure and AWS components for a security-confidential cloud environment alongside the operations and networking teams.
- Troubleshot time-critical production incidents across UI, API, and database layers, restoring service and fixing root causes; reviewed pull requests and supported developers on technical problems.

Technologies: ASP.NET Core, ASP.NET Framework, C#, MS SQL Server, Azure DevOps, Angular 12, React 18, JavaScript, JSON, HTML5, CSS3, T-SQL, Magento, PCI DSS

.NET Developer
August 2021 – July 2022

Speridian Technologies, Toronto

- Designed and developed full-stack web applications with Angular 11 and .NET 5 Web APIs, working within an Agile team across every phase of the SDLC.
- Built an event-driven integration on RabbitMQ — message consumers plus scheduled SQL jobs that process queued events and generate downstream data — decoupling upstream systems from reporting workloads.
- Implemented system-wide audit logging with SQL triggers and stored procedures that capture before/after record changes for traceability and support.
- Upgraded and extended Telerik Kendo UI grids, forms, and charts in Angular, replacing custom controls so the team could focus on value-generating features.
- Set up and configured Microsoft Azure cloud components and Azure DevOps pipelines for development, test, and production environments.

Technologies: ASP.NET Core, ASP.NET Framework, C#, Angular 11, .NET 5, MS SQL Server, Azure DevOps, JavaScript, JSON, HTML5, CSS3, T-SQL

Software Engineer
March 2020 – August 2021

Invesco Enterprise Services, Charlottetown

- Partnered with Product Owners and Scrum Masters to translate user stories into automated process flows built in the AWD BPM tool.
- Built rule-driven document-filtering automation using XML logic and Mobius Document Direct, removing manual document-handling steps.
- Developed ASP.NET C# user interfaces for custom internal applications on a modern .NET backend.
- Wrote parameterized stored procedures powering reporting and data retrieval across SQL Server and Oracle.
- Built reusable SSIS ETL packages to ingest flat-file, Excel, and XML sources into SQL Server, plus DTS import/export routines delivering SQL Server data to client-side destinations.

Technologies: ASP.NET, C#, AWD BPM, MS SQL Server, SSIS, Oracle, Jira / Confluence, JavaScript, JSON, HTML5, CSS3, T-SQL

Software Developer
July 2019 – Dec 2019

Bell Canada (MSI Corp), Toronto

- Built Angular front ends backed by ASP.NET Core Web APIs for internal business-process applications.
- Designed and automated business processes in IBM BPM 8.5 — developing Business Process Definitions (BPDs) from requirements and deploying them to test environments.
- Captured data requirements with business analysts through process blueprints and Visio diagrams.
- Validated BPDs with positive and negative test cases, comparing expected and actual results through manual and automated testing.

Technologies: IBM BPM 8.5, Oracle, Jira / Confluence, Microsoft Visio, HTML5, CSS3, JavaScript, Angular, ASP.NET Core, C#, MS SQL Server

Senior Software Developer

Dec 2015 – July 2019

Zerothcode Inc., Toronto, Canada / Anand, India

- Architected and built a multi-module School ERP platform on ASP.NET MVC, ASP.NET Core Web API, Angular, and SQL Server that automated school back-office workflows and streamlined resource planning.
- Designed RESTful APIs, normalized SQL Server schemas, and stored procedures, and built responsive Bootstrap UIs across the application.
- Worked directly with clients to turn business requirements into scalable solutions, owning scope definition, estimation, planning, and tracking for API and application development.
- Mentored junior developers through code reviews and pairing, establishing coding standards across design, coding, testing, and debugging.

Technologies: HTML5, CSS3, ASP.NET MVC, ASP.NET Core Web API, C#, Angular, MS SQL Server, JavaScript, Bootstrap 3

EDUCATION

Post-Graduation (Mobile Application Design and Development) Sep 16 - Apr 18
Lambton College, Toronto, Toronto, Canada · Score: 3.8/4.0

Bachelor's degree (Computer Engineering) July 12 - May 16
A.D. Patel Institute of Technology (GTU), Gujarat, India · Score: 6.94/10

CERTIFICATIONS

- AWS Certified Solution Architect - Professional
- AWS Certified Developer - Associate

PROJECTS

Mobile Blood Bank — A.D. PATEL Institute of Tech
Android (JAVA), MySQL, ASP.NET
